DETAILED ACTION

Allowable Subject Matter

1. Claims 1-22 are allowed.

Examiner's Statement of Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art along or in combination fails to teach or make obvious the following limitations related to the unique and specific timing set-up sequences as:

"setting a back-off time and a linger time based on a location of the sequence number within a transmit window maintained by the sender for retaining recently transmitted data of the multicast transmission for data repairs such that the response back-off time is shorter as the sequence number is closer to a trailing edge of the transmit window; sending repair data for the missing packet after expiration of the back-off time; and waiting for expiration of the linger time after sending the repair data for the missing packet and ignoring other negative acknowledgments for the missing packet received during the linger time" as recited in the independent claims 1 and 14, and

"setting a data waiting timeout according to a statistical average time for receiving repair data from the sender and a size of a transmit window maintained by the sender for retaining recently transmitted data of the multicast transmission for data repairs; waiting for repair data for the missing packet up to expiration of the data waiting timeout; and resending the negative acknowledgment after

expiration of the data waiting timeout if the repair data for the missing packet is not received" as recited in the independent claims 4 and 17.
